SG1J S2 SESSION COMMENTARY  
5 OCTOBER 1987 AM SESSION  
[REDACTED]

My rapid almost panicky execution of ideograms caused some problems today. The sloppiness of the ideograms caused minor inaccuracies in their translation, which ultimately led to reduced contact with the signal line and AOL drive (bridge). Slowing down and relaxing while the ideogram is drawn will result in a more accurate depiction of the site gestalt. Such an ideogram is easier to translate correctly and will allow me to establish strong signal line contact early on in stage 1.

I seem to have a strong need to develop an orientation / dimensional feel of the site, it is at this point that I feel that I am in good contact with the signal and start to get more S2s. I still worry because S2 for me is not as of yet the fast and furious process that Paul described in lecture. More practice and less editing is needed I suppose.
